AI-assisted environmental health

Aero-Biome

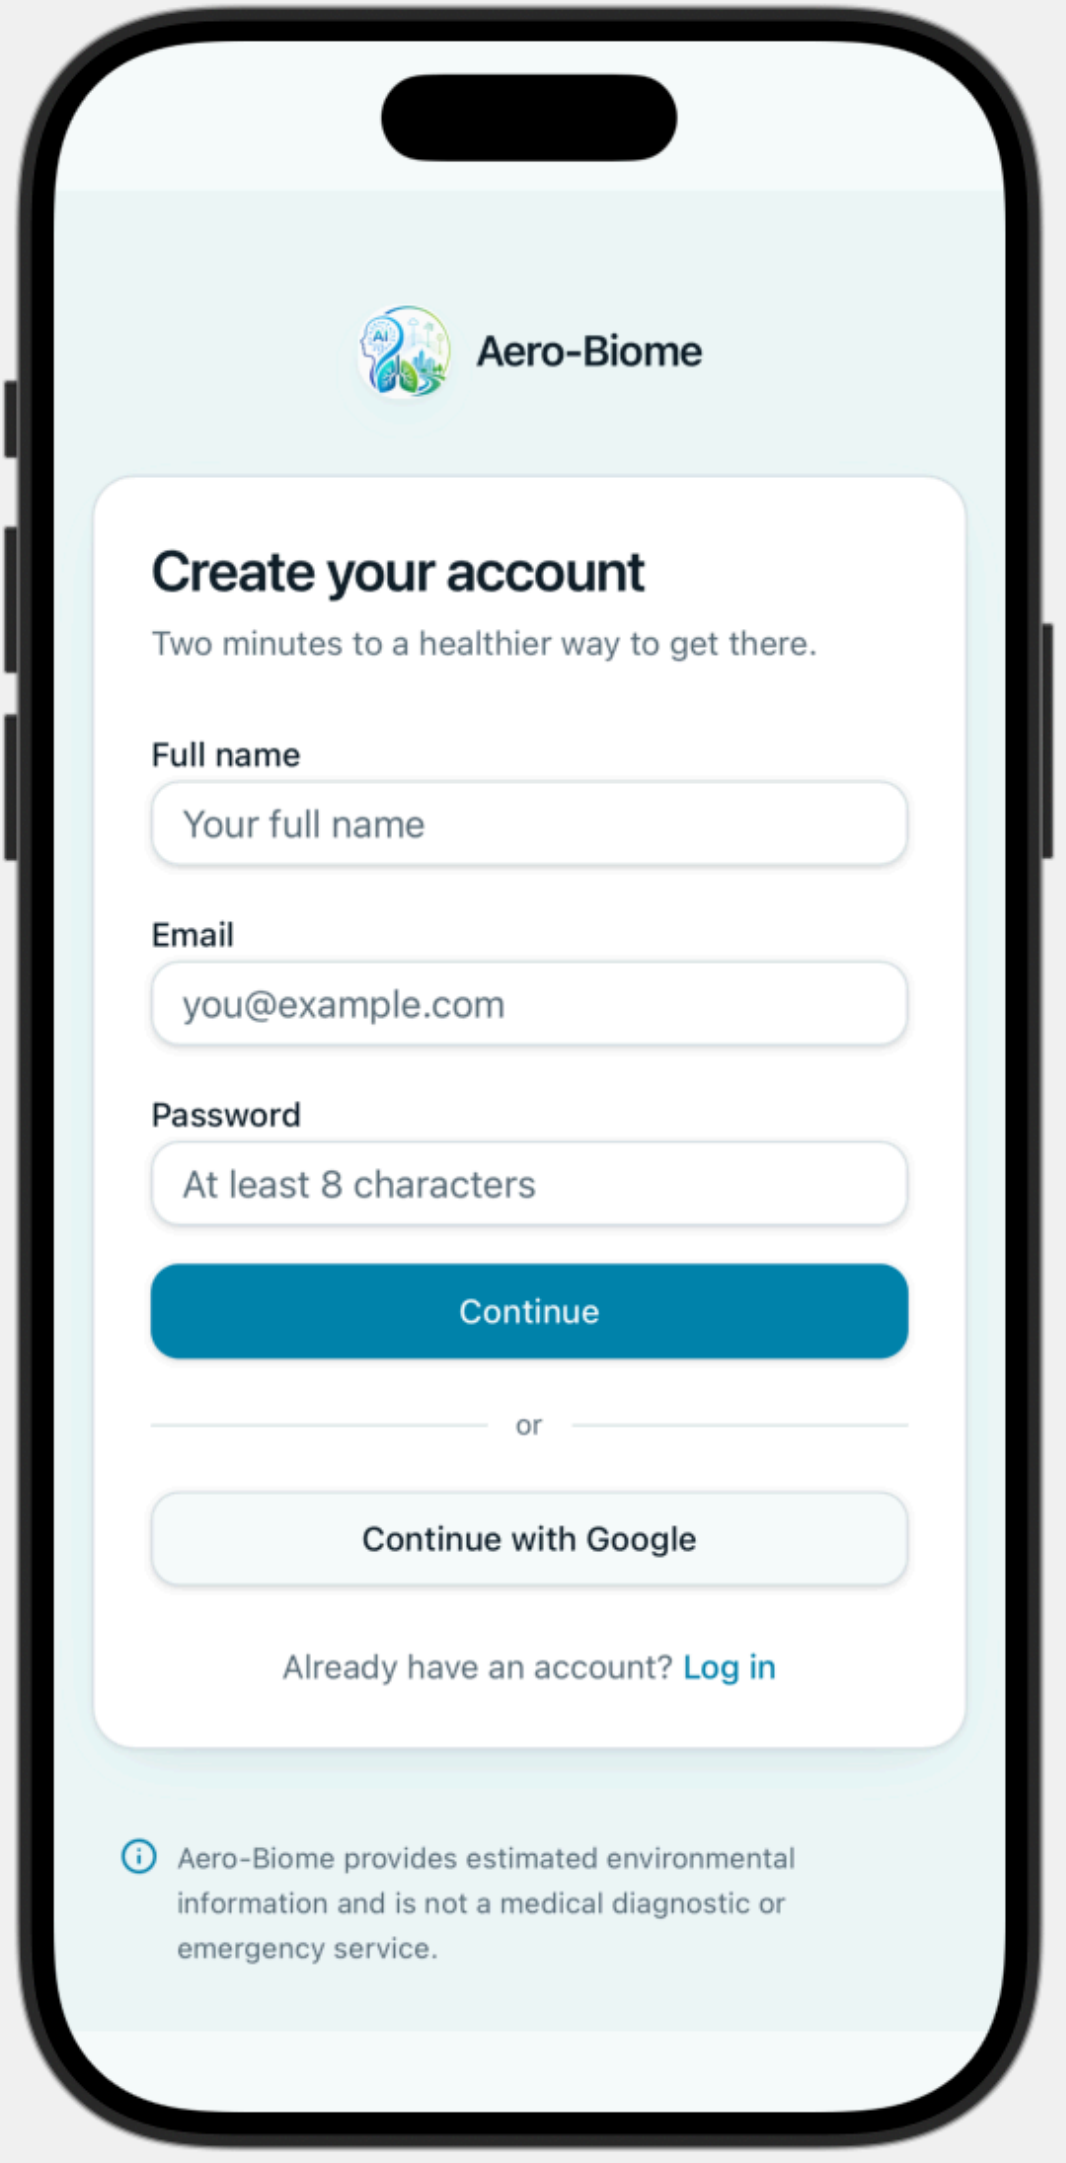

Find a healthier way to get there.

Traditional navigation optimises for the shortest or fastest route. Aero-Biome looks at the air you would actually breathe along the way — air quality, particulates, pollen, heat, shade, greenery and traffic exposure — and combines it with your personal environmental sensitivities to estimate which walking route is likely to be easier on your body.

LIVE DATA

Open Health Map

Weather and air-quality figures below are live for your device's location, taken from the free public Open-Meteo weather service. They describe the wider area around you, not an exact street-level measurement.

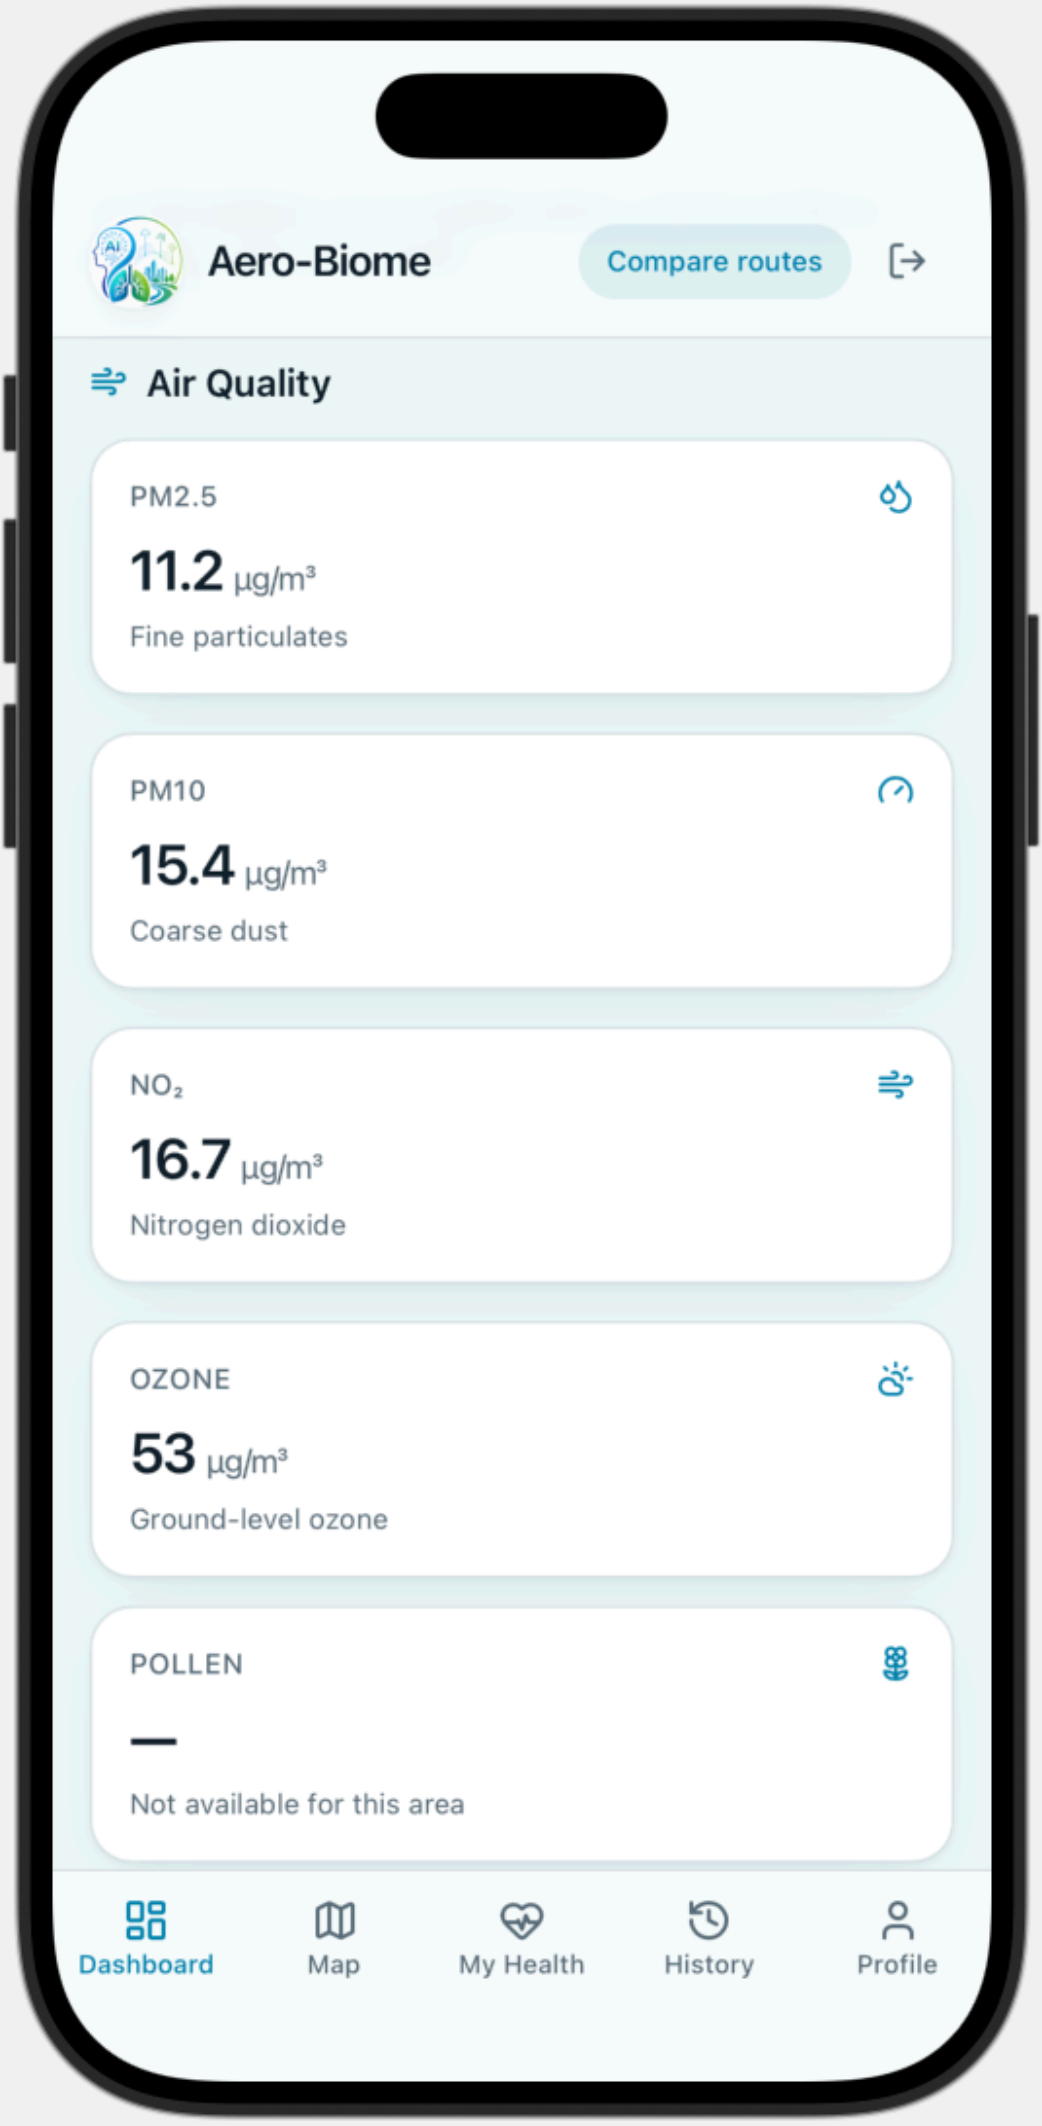

Current Environmental Risk

Estimated environmental risk is low right now.

The biggest contributors are ground-level ozone
