COGNITIVE ASTRONAUT INTERFACE

COGNITIVE ASTRONAUT INTERFACE

BRAIN SIGNALS | AI | ROBOTICS | A SAFER TOMORROW

BRAIN SIGNALS

EEG headset captures blinking, focus and attention.

REAL-TIME AI

Python processes and interprets signals into commands.

EMERGENCY RESPONSE

Abnormal or no signal triggers automatic safety actions.

EEG → PYTHON + AI → ROBOTIC ASSISTANT → SAFETY RESPONSE

THE CHALLENGE

Manual control can be difficult in microgravity, confined spaces, and emergencies.

THE SOLUTION

Hands-free robotic control with intelligent emergency response.

TECHNOLOGY STACK

EEG • Python • AI • BCI • Robotics • Arduino
